DETAILED ACTION

Response to Amendment

1. The amendment filed on August 3, 2004 has been entered; no new claims have been introduced.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claim 39, 41 and 42 are rejected under 35 U.S.C. 102(b) as being anticipated by Takeda et al. ("Takeda") (EP 884626).

Takeda discloses (see figs. 9, 142- 147, 160-168, 174 and page 39, lines 28-58) a method for fabricating a liquid crystal display device including a liquid crystal layer clamped between a first substrate 17 and a second substrate 16, said method comprising the steps of: (a) forming a pixel electrode pattern 13 on said first substrate; (b) painting a resist film on said pixel electrode pattern; (c) exposing and developing said resist film and forming a resist pattern having a shape, in which multiple branches are repeated, on said pixel electrode pattern; conducting an ashing process for a resist pattern (page 40, lines 30-37); and conducting a thermosetting process for said resist pattern (page 42, lines 3-38); so that liquid crystal molecules in said liquid crystal layer orient approximately in vertical to a surface of said liquid crystal layer, and said liquid state in which a driving electric field is not applied to said liquid crystal layer, and said liquid

Art Unit: 2826

crystal molecules orient approximately in parallel to said surface of said liquid crystal layer in a driving state in which the driving electric field is applied to said liquid crystal.

As for claim 41 and 42, he specification contains no disclosure of either the critical nature of the claimed arrangement or any unexpected results arising therefrom. Where patentability is said to be based upon particular chosen dimensions or upon another variable recited in a claim, the applicant must show that the chosen dimensions are critical. In re Woodruff, 919 F.2d 1575, 1578, 16 USPQ2d 1934, 1936 (Fed. Cir. 1990).

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 40-42 are rejected under 35 U.S.C. 103(a) as being unpatentable over Takeda in view of Bozler et al. ("Bozler") USPN 5,959,763.

Takeda discloses the method of fabricating a liquid crystal display as recited in the claim, but does not disclose exposing a resist film at less than double exposure amount of an exposure threshold for said resist film.

Bozler discloses (see fig. 31 and col. 19, lines 58-67 and claim 16) exposing a resist film at less than double exposure amount of an exposure threshold for said resist film.

Application/Control Number: 10/665,177

Art Unit: 2826

Therefore, it would have been obvious to one skilled in the art at the time the invention was made to incorporate Bozler's teachings with Takeda's invention since that would provide a corrugated structure as taught by Bozler.

As for claims 41 and 42, Bozler discloses a resist film having a thickness with the range recited in the claims.

6. Claims 40 and 43 are rejected under 35 U.S.C. 103(a) as being unpatentable over Takeda in view of Yamanaka et al. ("Yamanaka") USPN 6,452,653.

Takeda discloses the method of fabricating a liquid crystal display as recited in the claim, but does not disclose exposing a resist film at less than double exposure amount of an exposure threshold for said resist film.

Yamanaka discloses (see col. 22, lines 14-45) the benefits of adjusting the cumulative exoposure dose of a resist film.

Therefore, it would have been obvious to one skilled in the art at the time the invention was made to incorporate Yamanaka's teachings with Takeda's invention since that would achieve the control of resist film thickness as taught by Yamanaka.

As for claim 43, Yamanaka discloses (see col. 31, lines 40-65) a thermosetting process at a temperature within the range cited in the claim.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to A. Sefer whose telephone number is (571) 272-1921.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nathan Flynn can be reached on (571) 272-1915.
